

## PRODUCTS & SERVICES

Oil Installer spoke to a selection of new OFTEC members about the benefits OFTEC membership offers their company.

### Overwhelming support

**EPS Components'** membership of OFTEC originally came about as part of the development and launch of the remote acting firevalve. Previously trading as Euro Plumbing Supplies, the company was acquired by Flowtech Holdings, a UK catalogue distributor of fluid power and industrial products. "OFTEC membership had lapsed under the previous owners, although the approvals remained intact: this has now been addressed and we have been warmly welcomed back. In fact the support and information provided by OFTEC has been overwhelming, and we look forward to getting further involved as we always look for the help, support and benefits offered by being involved with recognised technical bodies and committees. Our remote acting firevalve is currently under renewed testing with Building Services Research and Information Association (BSRIA) for updated approval to OFS E101:1998. Also included is the 90 degree valve bringing up to date the original BSRIA testing and forming the basis of the OFCERT scheme certification of oil firing equipment. When testing is completed we will be promoting the valves at OFTEC shows and in our catalogue. ■

### OFCERT approval

**J Seed**, a family owned and run company, specialises in the design, manufacture and installation of oil tanks and filler cabinets along with the supply of many ancillary products held in stock for immediate dispatch.

"Having been OFTEC registered for a number of years on the installation side it was a natural progression to become OFTEC registered for our manufacturing. J Seed offers bespoke solutions for fuel storage and we pride ourselves on manufacturing high quality tanks from 100 to 80,000 litre capacity. We always ensure our products comply with regulations and keep up with industry changes, and are hoping to put some tanks through for OFCERT approval later in the year. With nearly 50 years' experience we can often help overcome problems; for example, for a church with vandalism problems, we installed a standard tank into a chamber with a custom made metal lid to keep it safe." ■

### T200 accreditation

**Koronka Manufacturing**, an established manufacturer of fuel storage tanks for all applications, became an OFTEC member to obtain T200 accreditation and to keep up to date with legislation changes within the fuel oil industry. Manufacturing tanks from 500 to 180,000 litres in one single piece, Koronka has a comprehensive range of cylindrical, rectangular, above ground and below ground tanks for diesel, gas oil, lube oil, waste oil, petrol, avgas and jet A1.

"An ISO9001 registered company, Koronka can give you and your customers quality and reassurance that what we build meets all the current bunding legislation with a high standard of finish. We are ready to advise on all matters regarding fuel storage. Our sales team's advice is free, and can guarantee a quotation for new storage tanks the same day." ■

### Better understanding of the market

**Security & Electronic Technologies GmbH**, or Secu-Tech, is a design technology company based in Leobersdorf, Austria which has a number of innovative products that serve the oil, petroleum and LPG markets.

Secu-Tech joined OFTEC to better understand the UK and Irish markets and to actively participate in the technical committees which help contribute towards future improvements in the oil industry. Secu-Tech has enjoyed success in diverse fields but is well known for its electronic overfill prevention devices and the associated level remote control (LRC) system. Now installed in over 3000 oil delivery tankers, LRC offers improved delivery efficiency by eliminating potential overfilling and clean up costs with the investment often recovered within just a few months. Call Bob Allen on 01752 777270. ■
