

## Application Example

### Level Gauging in LPG tanks – application in Poland

Poland's LPG companies are counting on Secu-Tech's system for Level Gauging. For that purpose we are using a device called TEK822 with the Rochester adapter.

The device is ATEX approved and via the installed SIM Card the device is sending the data to a platform called "Tank Monitoring" used by the LPG companies and the corresponding haulers.

The App is used by the tank-owner or customer itself to have a quick overview over his tank.
